NOTES

- 1-These Trees must live in pairs to bear fruit.
- 2- If trees contract blight, contact us for treatment proceedure.
- 3-Frost Damage possible
- 4- Treat soil containing grubs with Diazinon
- 5- Plant in partial shade to discourage insect attack.
- 6-(2-1) grown 2 years as a seedling, 1 year as a transplant
- 7- Fast Growing
- 8-Spring Planting best, Fall planting not recommended
- 9-USDA- Soil Conservation ,Plant Materials center release
- 10-Shade Tolerant
- 11-Brine Tolerant
- 12- Alkaline Tolerant
- 13- Wetlands
- 14-Fall transplanting not recommended
- 15- Wild Pulled

Wildlife

- A-Deer
- B-Ruffed Grouse
- C-Cottontail
- D-Pheasant
- E-Turkey
- F-Quail
- G-Hummingbird
- H-Human
- J-Butterfly
- K-Bee
- +Strong Preference, for variety of wildlife
- *Winter-bearing seed holder, food source for wildlife
- IR-Insect Resistant
- I-Deer Resistant

FRUIT TREES

All Fruit Trees are \$25.00 each

Most Fruit Trees are Diploid Pollinators, Pollination is an important topic when growing fruit trees because many - but certainly not all - varieties require pollination from a compatible donor tree before they can set fruit. **Other Tree varieties may be available. Please ask for details.

Apple Trees All tree stock: 3/4' bare root unless specified	Quantity Ordered	Total
Ambrosia* EMLA 7 Aromatic with a pleasing flavor, is fast becoming a breakout variety for growers. Fruit is medium to large with a creamy yellow background and pink blush on the sun-exposed side. Fruit is sweet and juicy.		
Macoun EMLA 7 An excellent dessert apple with a deep red skin. The flesh is juicy and flavorful and is similar in appearance to Red McIntosh. Macoun is good for home use, farmers markets, and fruit stands.		
Scarlet Spur II Red Delicious (* 7/16 root stock) EMLA 7 Now comes the next generation of America's earliest, best coloring Red Delicious, Scarlet Spur II. Although Scarlet Spur II finishes coloring about three days earlier than its parent, it has all the winning characteristics of the original – dark mahogany color, crisp white flesh, excellent fruit production, and outstanding type.		
Red Rubens® EMLA 7 A new Italian cross of Gala and Elstar, Red Rubens® combines intense apple flavor with a pleasing sweetness. This scarlet mutation delivers on its name. The fruit is crisp, juicy, and conical in shape. A favorite in Europe, it is now available in the U.S.		
Plum Trees		
Duarte A large, heart-shaped plum, Duarte has deep red skin and flesh color. The fruit is large and very juicy when ripe. It has a sweet flavor and is excellent for eating fresh or for canning.		
Elephant Heart A large, heart-shaped fruit with red flesh and dark red skin. This old favorite has good quality and a distinctive flavor.		
Italian Prune One of the finer prune-plum varieties, this excellent shipping prune is a heavy bearer. It produces large, dark purple fruit that is good for both canning and drying.		
Peach Trees		
Elberta Elberta is firm and yellow in color with golden skin covered in a partial red blush. Elberta trees are hardy and productive. This peach, well-known for its shipping qualities, has been one of the leading peach varieties for over 80 years and is a superior processing variety.		
Glohaven This large, nearly round, uniform peach has little fuzz. Its skin color is mostly red with a golden background. The flesh is clear yellow and firm with excellent quality. Glohaven is a favorite for canning because it resists browning. The tree is vigorous and		
Redhaven Redhaven is the standard by which all early peaches are judged. The flesh is firm and yellow with a smooth texture. The tree is vigorous and early bearing. An attractive red and golden skin color further enhances its popularity. Redhaven is excellent for canning and shipping for the fresh market.		
Pear Trees		
Bartlett * Large, heavy bearing variety with excellent quality. Long considered one of the choicest canning varieties. Bartlett accounts for about 75% of the US and Canadian pear production. Tree is vigorous and very productive. Fruit Ripening Time: Late August		
D'Anjou * A very high quality dessert pear. Skin is light green in color and does not change to yellow upon ripening. A good pollinator for Bartlett. Flesh is very juicy, sweet and rich in flavor. Fine texture. The tree is very hardy, bears early and is quite blight resistant. Stores and ships well. Fruit Ripening Time: Mid September		
Golden Russett Bosc This Bosc sport was discovered in the Fukui Orchard near Parkdale, Oregon. The fruit is long and symmetrical with a uniform golden russet color overlaying yellowish-white flesh. It matures about the same time as Anjou. The trees are large and vigorous and require cross-pollination.		
Columbia Red Anjou This Anjou mutation was discovered at Eugene Euwer's orchard near Hood River, Oregon. It produces uniform oblong-ovate fruit that is red with golden-white flesh that has a smooth texture. The fruit matures in late August to mid-September and stores well. It is a vigorous tree that requires cross-pollination. (Bartlett is a suitable pollinator).		

Cherry Trees	Quantity Ordered	Total
Bing Cherry The standard by which all other varieties are judged, Bing continues as the leading dark sweet cherry grown in the Western United States. Bing is also the No. 1 commercial sweet cherry sold in North America. The fruit is dark mahogany from its glossy skin to its dense, juicy flesh. It is exceptionally large and flavorful. Bing does not pollinize Lambert or Royal Ann.		
Black Gold Another new introduction from Cornell University, BlackGold™ is a self-fertile dark sweet cherry. It ripens approximately seven days later than Bing, is late blooming, and somewhat frost resistant. The variety demonstrates good hardiness in cooler growing areas. BlackGold™ is a good pollinizer for late-blooming varieties.		
Montmorency The No. 1 processing cherry on the market, Montmorency produces plump, round red fruits with yellow flesh and clear juice. The highly acidic flavor of Montmorency holds up well to cooking. Like other tarts, this cherry is self-fruited. The tree is early bearing and a heavy producer.		
White Gold A new, self-fertile sweet cherry variety originating from the breeding program at Cornell University. Similar to Rainier, the flesh is yellow, sweet and firm. The fruit is yellow with a shoney red blush and ripens just prior to Bing.		
Strawberries -	Bundles of 25= \$25.00	
	Earliglow	
	Jewel	
	Sparkle

Customer Satisfaction & Guarantee-We do not guarantee the survival of these trees. It is the responsibility of the customer/landowner to make sure that they are planted properly and watered. It is unlawful for these trees, shrubs, and other plants to be resold with the roots attached, in accordance with the Insect Pest and Plant Disease Act, P.A. 189 of 1931, as amended.

Midland Conservation District is an independent unit of state government which has a philosophy and commitment to the stewardship and conservation of the environment. The MCD consults with landowners to educate them in the planning and use of their land. The U.S. Department of Agriculture (USDA) prohibits discrimination in all of its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, political beliefs, genetic information, reprisal, or because all or part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

EMLA 7 Root stock, a tree on this root stock will be 50-60 % smaller than a standard tree. Does well on most soils. May need support in early years, very winter Hardy. Is susceptible to suckering. Extremely tolerant to fire blight

EMLA 111 Root Stock, produces a tree 2/3 size of standard tree, good producing rootstock well anchored and tolerant of drought conditions, widely adapted to most soil conditions.
